

## **New features of SmarT-Trigger 4 Version 4:00**

**Feb 2014**

The version 4:00 PC control software and system firmware provides the following new features

- 1) In field re-programming allows for fast firmware upgrade by use of bootloader.
- 2) Full system settings can be stored in non volatile memory in interface unit.
- 3) Ability for system to auto setup without the need for controller PC.
- 4) Toggle fire alternate between normal fire and print delay output on any slave channel
- 5) Fixed fire rate for static number of shots to be issued at the end of Inhibit period.
- 6) Pre Inhibit block period where inhibit starts a user set period prior to next expected trigger.
- 7) 'Navlink' allows a second serial port to interface vessel speed data from navigation serial link.
